Tee

Settler / tank

System components

Assembly tools

Screwdriver

Angle grinder

Hacksaw

Spirit level

Measure

Pencil

Spray for seals

Installation should be performed at temperatures above 5° Celsius

1

Roof measurement

$$E_p = (C + H/2) \times A$$

2

System selection

System 75/63 for $E_p \leq 100\text{m}^2$
System 130/90 for $E_p \leq 110\text{m}^2$

System 75/63 for $E_p \leq 200\text{m}^2$
System 130/90 for $E_p \leq 220\text{m}^2$

3

Gutter inclination min 0.3%/1rmt

Hook spacing

Hook installation at the highest point is recommended

Gutter installation

5

Nipple installation

6

Bottom installation

7

Clamp installation

90° corner installation

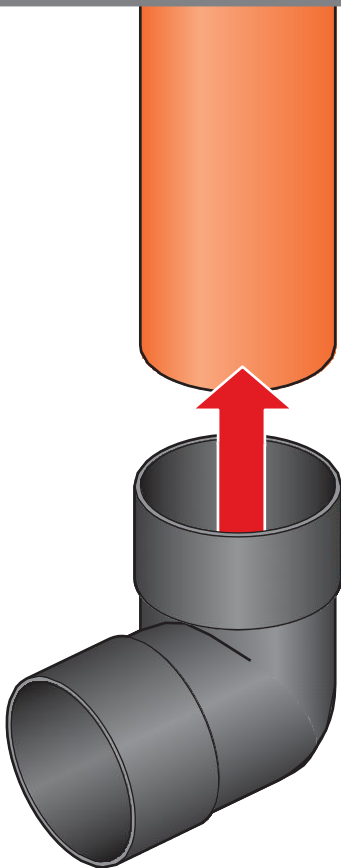

9

Pipe connection

10

Screed installation

11

Settler installation

12

Cutting the pipe with the hood extended
